Your WooCommerce data is a powerful asset, but getting it out is a challenge.

Store owners, marketers, and developers know that product data is crucial for success. Yet, default tools are limited, and manual exports are slow, error-prone, and impossible to scale.

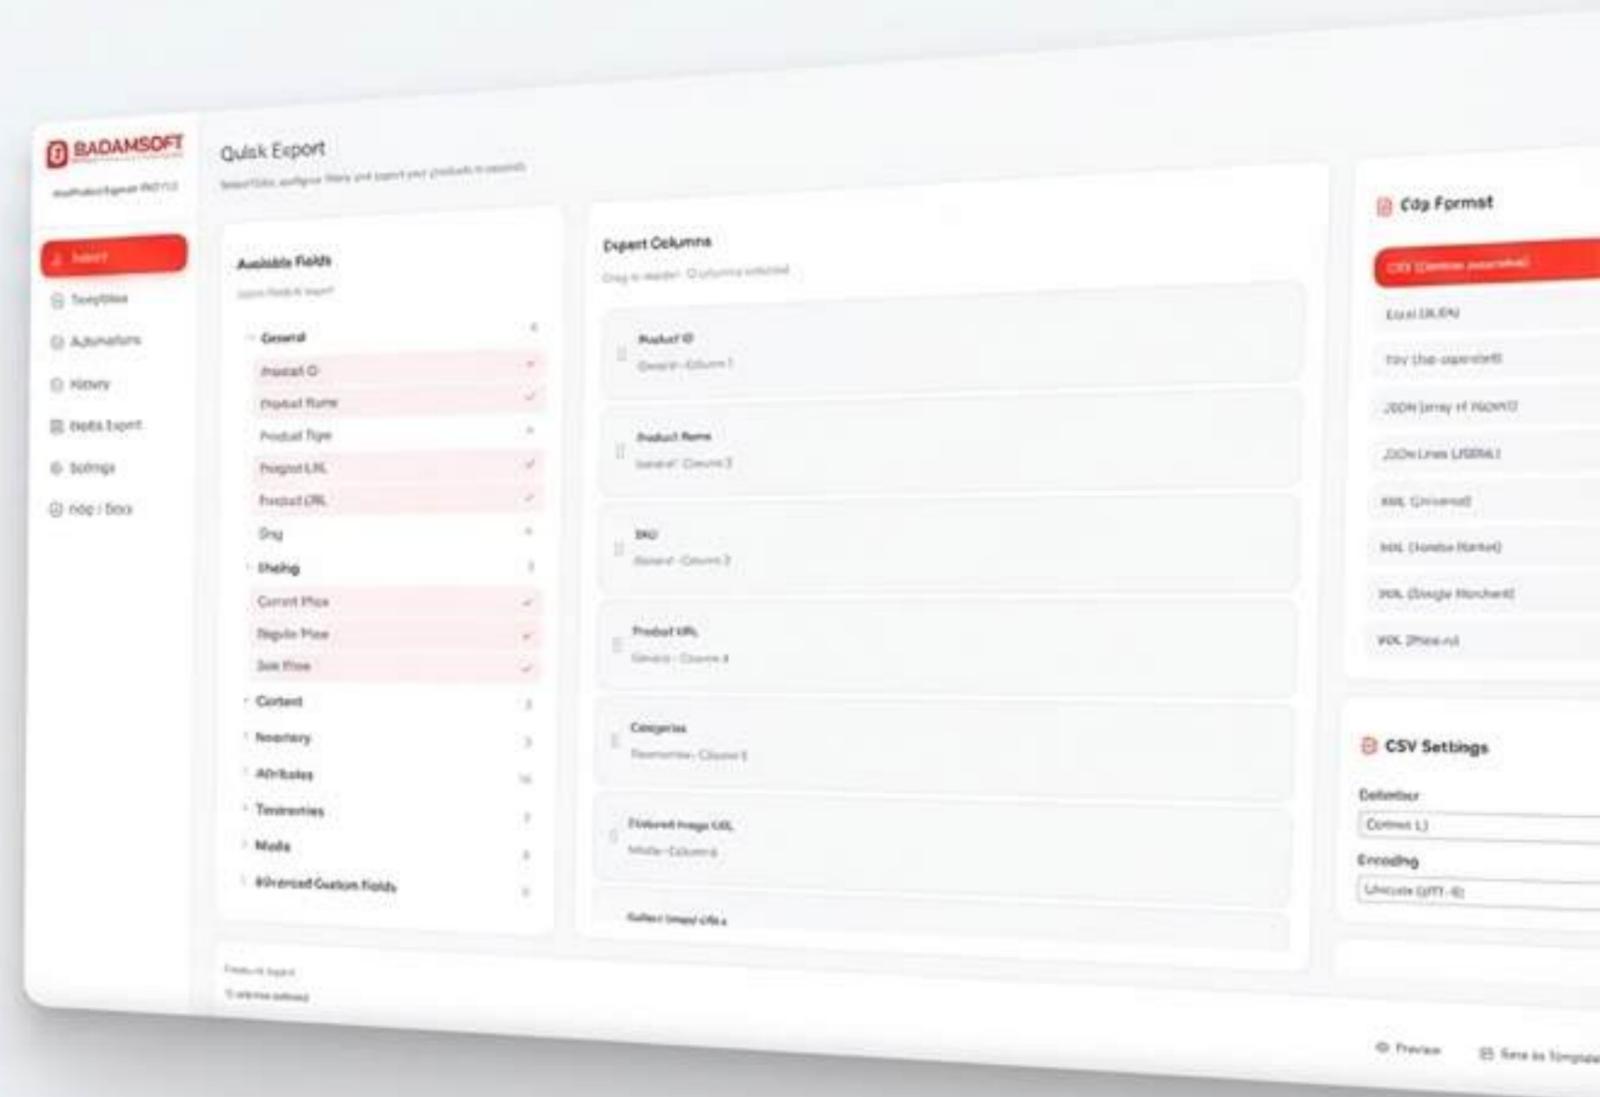

- ✗ **Time-Consuming Migrations:** Moving data to a new store or system is a manual nightmare.
- ✗ **Incomplete Backups:** Standard backups don't give you a clean, usable product catalog.
- ✗ **Complex Marketing Feeds:** Creating and updating feeds for Google Merchant Center or Facebook is a constant chore.
- ✗ **Difficult ERP/System Syncs:** Integrating with inventory or accounting systems requires custom, brittle solutions.

The perfect blend of power and simplicity for your product exports.

WooProduct Exporter was built from the ground up to solve these challenges. It features a modern, intuitive interface that makes complex export tasks simple, clear, and fast, aligning seamlessly with the WooCommerce ecosystem you already know.

- ✓ **Modern & Intuitive UI:** Feels natural from the first interaction.
- ✓ **Optimized for Scale:** Memory-safe batch processing for 100,000+ products.
- ✓ **Fully Localized:** Available in 12 languages for global teams.

Your Export Command Center: Full Control in 5 Steps.

BADAMSOFT
WordPress Exporter PRO 1.1.0

Quick Export

Select fields, configure filters, and export your products in seconds

1. Select Fields: Choose from comprehensive data groups like General, Pricing, Inventory, Attributes, Taxonomies, and Media.

2. Map Columns: Drag and drop to reorder columns and customize headers.

3. Choose Format: Select your desired file format.

4. Filter Products: Apply basic filters to narrow down your product selection.

5. Export Now: Click to generate and download your file instantly.

 XML (Universal, Yandex.Market, Google Merchant)

[PRO] **PRO Feature***: Attach all product images as a single ZIP archive with your export.

Pinpoint Products with Surgical Precision.

Go beyond basic filters with the Advanced Visual Condition Builder. [\[PRO\]](#)

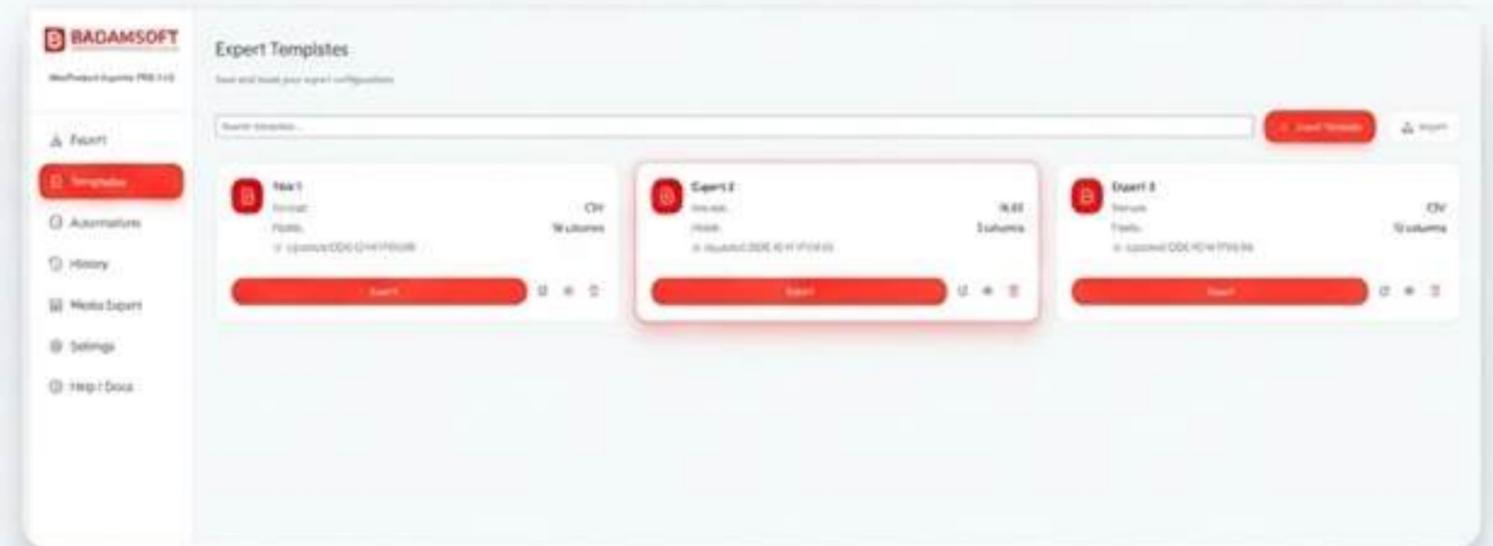

The Pro version unlocks an advanced filtering engine. Create complex rules with AND/OR logic to segment your catalog **exactly** as needed. No more manual data cleaning after the export.

- **Unlimited Conditions:** Combine rules based on prices, stock, dates, attributes, meta fields, and more.
- **Powerful Operators:** Use `=`, `≠`, `>`, `<`, `contains`, `is empty`, and others.
- **Pre-Export Preview:** Verify your filter results with a 20-row preview **before** running the full export, ensuring perfect accuracy every time.

Stop Repeating Yourself. Save, Reuse, and Share Your Workflows.

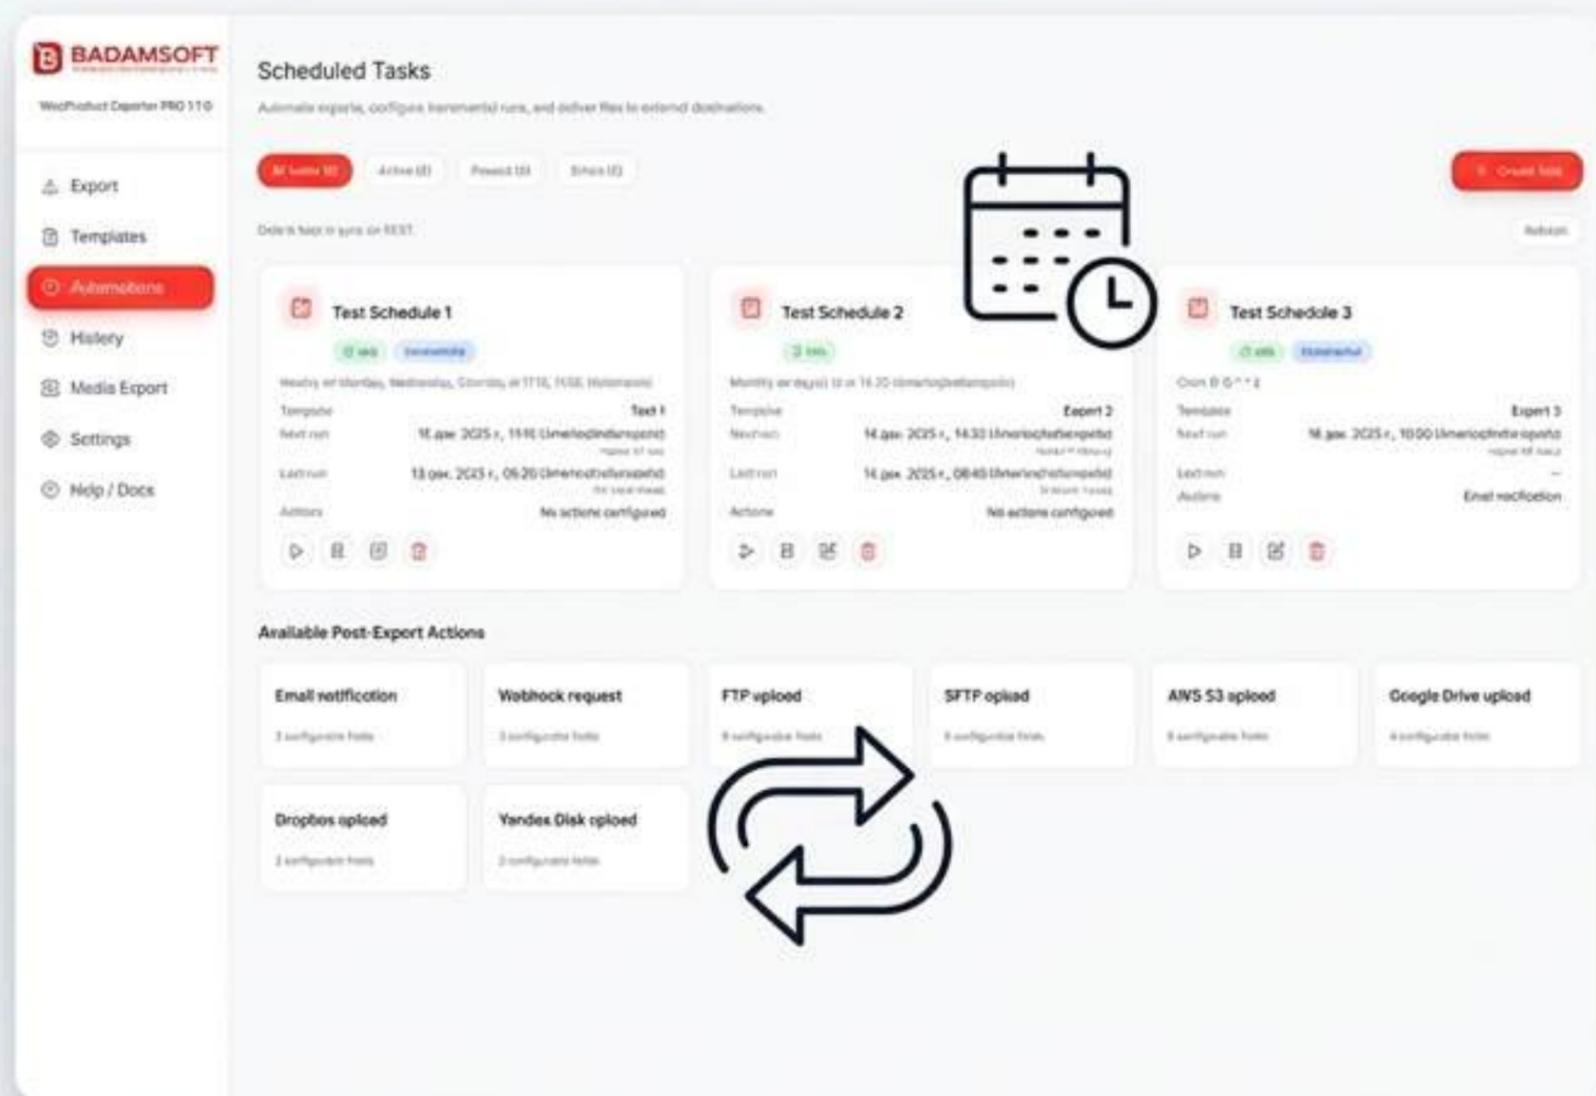

Any export configuration—fields, filters, format, and column order—can be saved as a reusable template. Drastically reduce setup time for recurring reports and migrations.

- **Save Your Settings:** One click saves your entire Quick Export configuration.
- **One-Click Actions:** Export, Edit, Preview, or Delete templates directly from the management screen.
- **Free Version:** Save 1 template to learn the workflow.
- **Pro Version:** Save **unlimited** templates. Import/export templates in JSON to share between sites.

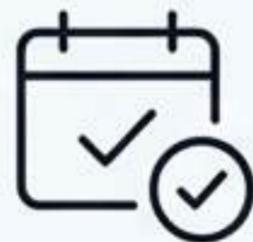

Put Your Exports on Autopilot. [PRO]

Schedule your saved templates to run automatically and deliver files anywhere.

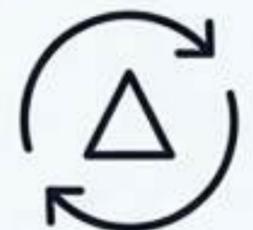

The screenshot displays the BADAMSOFT interface for managing scheduled tasks. On the left is a navigation sidebar with options: Export, Templates, Automations (highlighted), History, Media Export, Settings, and Help / Docs. The main area is titled 'Scheduled Tasks' and includes a sub-header 'Automatic exports, configurations runs, and deliver files to external destinations.' Below this are tabs for 'All tasks (3)', 'Active (2)', 'Paused (0)', and 'Deleted (0)'. A central calendar icon is overlaid on the task cards. Three task cards are visible: 'Test Schedule 1' (Weekly on Monday, Wednesday, Friday, at 11:00), 'Test Schedule 2' (Monthly on the 1st at 16:30), and 'Test Schedule 3' (Once a day at 10:00). Each card shows template details, next and last run times, and a note that no actions are configured. Below the tasks is a section for 'Available Post-Export Actions' with eight options: Email notification, Webhook request, FTP upload, SFTP upload, AWS S3 upload, Google Drive upload, Dropbox upload, and Yandex Disk upload. A circular refresh icon is overlaid on this section.

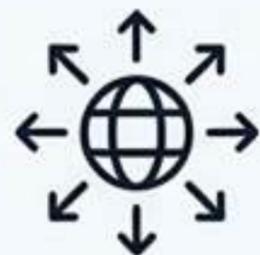

Flexible Scheduling:

Run daily, weekly, monthly, or define a custom CRON expression for complete control.

Incremental Exports:

Save time and resources by exporting only products that have changed since the last run.

Multi-Destination Delivery:

Send your export file to multiple destinations simultaneously after each run.

Deliver Your Data Wherever It Needs to Go. [PRO]

Automations are not just about scheduling; they're about integration. Connect your WooCommerce store directly to your business-critical systems.

A Complete Toolkit for Professional Data Management. **[PRO]**

Advanced Media Export

Go beyond URLs. Export images as a ZIP archive, upload directly to cloud storage, or copy to a local server folder. Inspired by the UI.

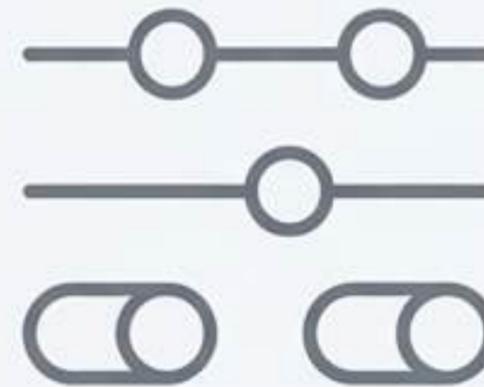

Unlimited History & Logs

Access a full, filterable history of every export. Download past files, re-run jobs, and view detailed execution logs for debugging. (Free is limited to 12 recent runs).

Multilingual Support

Export product translations from WPML or Polylang as separate columns or files per language.

Fine-Grained Controls

Configure advanced settings for database cleanup, notifications, memory limits, and role-based access control to manage who can use the plugin.

The Perfect Export Solution for Your Business.

From solo store owners to large agencies, WooProduct Exporter provides the tools to streamline data workflows and drive growth.

Store Owners

Easily create backups, perform site migrations, and synchronize your catalog with external systems.

Marketing Platforms

Automate product feeds for Google Merchant Center, Facebook Catalogs, and other ad platforms.

Agencies & Developers

Gain full control over client data exports with a reliable, automation-first tool.

ERP/CRM Integration

Generate real-time, structured product feeds for seamless integration with enterprise systems.

Dropshipping Stores

Automate the flow of product data to suppliers and marketplaces.

Works Seamlessly with Your Tech Stack

WPML

Full multi-language export support.

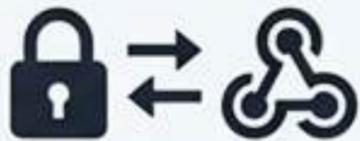

ACF

Export all your Advanced Custom Fields data.

Yoast SEO

Include SEO metadata in your exports.
